

DCM UNI-MIX A

NPK 10-5-15 + 2 MgO

Composition

Fertiliser – Compound organo-mineral fertiliser NPK (Mg) 10-5-15 (2)

10 %	Nitrogen Total (N) of which: 2 % nitric nitrogen 1,5 % ammoniacal nitrogen 2 % ureic nitrogen 4,5 % organically-bound nitrogen	
5 %	PHOSPHORUS PENTOXIDE (P ₂ O ₅) soluble in mineral acid	[2,2% P]
15 %	POTASSIUM OXIDE (K ₂ O) soluble in water	[12,5% K]
2 %	MAGNESIUM OXIDE (MgO) soluble in mineral acid	[1,2% Mg]
33 %	ORGANIC MATTER	

Characteristics

- the organic nutrients are gradually released by the soil life over 75 to 100 days, according to the needs of the plant
- an organo-mineral fertiliser that combines the advantages of a long-working organic fertiliser and a fast-working mineral fertiliser
- combination of a good start growth at the beginning of the cultivation, and a soft and uniform action resulting in a steady growth (till 100 days)
- permits a simple and time-saving fertilisation in all kinds of cultures, without causing nutritional imbalances in the soil
- ideal for all lettuce variations, lamb's lettuce, celery, curled endive, radish and other fruiting and rooting crops
- better harvest quality due to the long-action potassium
- organically-bound nutrients: nutrients are gradually released by the microbial soil life + production of humus for better rooting and less leaching

Form

MINIGRAN® TECHNOLOGY = a microgranule with dimensions between 800 and 2500 micron, of which at least 80 % between 1000 and 2000 micron

- homogeneously composed mini-granule
- up to 60 % more efficient distribution for uniform colour and growth
- faster starting activity with the same long extended release
- with easily assimilable organic phosphorus sources for improved root development
- low in odour, practically dust-free application
- easy to apply with all measuring devices and professional spreaders

Packaging

bags of 25 kg – 36 bags/euro-pallet (= 900 kg)

DCM UNI-MIX A

NPK 10-5-15 + 2 MgO

Instructions for use

The exact rate depends on the needs of the crop, the time of application, the nutritional reserve in the soil and the intensity of irrigation. Ask for our specific advice, tailored to your plants and cropping system.

VEGETABLES

- leaf vegetables
 - *cabbage lettuce, curled endive* 8 – 15 kg/100 m²
 - *celery* 12 – 15 kg/100 m²
 - *lamb's lettuce* 6 – 12 kg/100 m²
 - *lollo rossa, lollo bionda, oak leaf lettuce* 8 – 12 kg/100 m²
- fruiting vegetables (planting) 10 – 20 kg/100 m²
- other vegetables: radish, herbs 8 – 12 kg/100 m²

FRUIT (strawberries, grapes...) 8 – 15 kg/100 m²

TREE NURSERY FIELD CULTIVATION 10 – 15 kg/100 m²

TREE NURSERY CONTAINER CULTIVATION

- basic fertilisation 2- 4 kg/m³
- topdressing (on top of the pot) 2 – 3 g/L potgrond

ORNAMENTAL PLANT CULTIVATION (cut flowers, flowering plants,...)

- planting 10 – 15 kg/100 m²
- maintenance fertilisation 8 - 12 kg/100 m²

LAWNS & SPORT FIELDS (maintenance) 6 - 12 kg/100 m²

DCM products meet the nutritional values indicated on their packaging and/or the technical data sheets, and are fully traceable. Product advice is intended to be used for informative purposes only and does not imply any commitment or agreement. The instructions for use are based on many years of practical experience and research. Each plant and each cropping system has its own nutritional requirements. The time of application, nutrient reserves in the soil/growing medium and statutory fertilization standards are also important in determining fertiliser application rates. It is advisable (good practice) to always test new product applications on a small scale first. Fertilisers may cause EC to increase and can affect the pH level. All of these factors are essential to consider when using one fertiliser product or when combining different fertilisers. Growing media to which fertiliser products have been added should be used as soon as possible after delivery. DCM accepts no liability for consequential damage caused by the use of its products.
