

# DCM COPRON

Crumble/granule

## Composition

Organic soil improver – Enriched organic soil improver NPK 4-3-2

4 %	TOTAL NITROGEN (N) of which 4 % organically-bound nitrogen	
3 %	PHOSPHORUS PENTOXIDE ( $P_2O_5$ ) soluble in mineral acid	[1,3 % P]
2 %	POTASSIUM OXIDE ( $K_2O$ ) soluble in water	[1,7 % K]
60 %	ORGANIC MATTER	

Suitable for use in organic agri- and horticulture in accordance with Regulation (EU) 2018/848 on organic production and its amendments.

## Characteristics

- The ideal farmyard manure replacement
- Organic soil improver composed of dried and concentrated raw materials of plant and animal origin NPK 4-3-2
- High organic matter content: improves both the physical and biological soil fertility
- Improved drainage and better air-water balance for good rooting
- Stimulates the existing soil life
- Mild-acting: can be applied until just before planting or sowing
- Ensures good growth of young plants, seeded or sodded lawns
- Long shelf life due to high dry matter content (95%)
- Safe: free of pathogens and weed seeds

## Form

Easy applicable **granule**- or **crumb** form, spreadable like a granular fertiliser

## Packaging

25 kg bags – 36 bags/euro-pallet (= 900 kg)

# DCM COPRON

NPK 4-3-2

## Instructions for use

The exact rate depends on the needs of the crop, the time of application, the nutritional reserve in the soil and the intensity of irrigation. Ask for our specific advice, tailored to your plants and cropping system.

When used before seeding or planting, spread and incorporate DCM COPRON in the top layer (25 cm). When used for existing plantings, water if the weather is dry.

### LAWN

- seeding and sodding ..... 10 - 25 kg/100 m<sup>2</sup>

### ORNAMENTAL GARDEN

- planting of trees and ornamental shrubs ..... 1 – 2 kg/m<sup>3</sup> dug out soil
- planting of hardy perennials and flowers ..... 10 – 20 kg/100 m<sup>2</sup>
- planting of hedges ..... 2 kg/10 linear meters
- maintenance ..... 10 – 20 kg/100 m<sup>2</sup>

### TREE NURSERIES

- ornamental shrubs and trees ..... 20 – 30 kg/100 m<sup>2</sup>
- roses ..... 25 – 30 kg/100 m<sup>2</sup>
- hardy perennials ..... 10 – 20 kg/100 m<sup>2</sup>
- forest plants ..... 15 – 20 kg/100 m<sup>2</sup>
- conifers ..... 15 – 25 kg/100 m<sup>2</sup>
- plant hole method ..... 10 – 20 g/ plant hole of 10 L

ORNAMENTAL PLANT CULTIVATION ..... 10 – 20 kg/100 m<sup>2</sup>

### VEGETABLES

- leaf vegetables ..... 10 - 15 kg/100 m<sup>2</sup>
- fruiting vegetables, leek, cabbages ..... 15 – 20 kg/100 m<sup>2</sup>
- leeks, cabbages ..... 15 – 20 kg/100 m<sup>2</sup>
- other vegetables ..... 8 - 15 kg/100 m<sup>2</sup>

FRUITS ..... 10 – 20 kg/100 m<sup>2</sup>

### SPORTS TURFS AND GOLFCOURSES

- laying-out ..... 15 – 25 kg/100 m<sup>2</sup>
- maintenance ..... 10 - 20 kg/100

DCM products meet the nutritional values indicated on their packaging and/or the technical data sheets, and are fully traceable. Product advice is intended to be used for informative purposes only and does not imply any commitment or agreement. The instructions for use are based on many years of practical experience and research. Each plant and each cropping system has its own nutritional requirements. The time of application, nutrient reserves in the soil/growing medium and statutory fertilization standards are also important in determining fertiliser application rates. It is advisable (good practice) to always test new product applications on a small scale first. Fertilisers may cause EC to increase and can affect the pH level. All of these factors are essential to consider when using one fertiliser product or when combining different fertilisers. Growing media to which fertiliser products have been added should be used as soon as possible after delivery. DCM accepts no liability for consequential damage caused by the use of its products.
